# Data Science

Data science combines math and statistics, specialized programming, advanced analytics, artificial intelligence (AI), and machine learning with specific subject matter expertise to uncover actionable insights hidden in an organization's data.

What is Data Science?

Using your skills to extract valuable data for companies or people

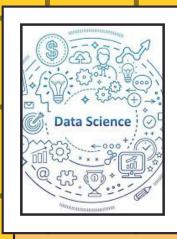

Why we need Data Science

Allows companies to use data and info from many different places and benefit from them

What it's used for

To put it simple, data science is used to find patterns to solve bigger puzzles

Do you need any skills for Data Science?

A good understanding of math and basic knowledge of programming will help you get started
